

Mockingbird — architecture

A self-service service-virtualisation platform. Teams upload an API spec; Mockingbird generates high-throughput stubs, deploys them to their own EC2 in minutes, and replaces licensed tools such as CA LISA and IBM Rational Test Workbench with open source.

10 formats

raw HTTP, Postman, OpenAPI, SOAP, XLSX, CA LISA, Kafka, MQ...

10 services

Python FastAPI + Node.js Fastify, React portal

10,000+ TPS

per stub — Spring Boot + WireMock, Java 21

~4 min

to redeploy a suspended stub, no re-upload

£0 licences

all open source, replacing £100K+/year tools

1,300+ tests

pytest, Vitest and Playwright end-to-end
